

patient@home

Patient Empowerment

User-driven development of technologies that support the patient in taking responsibility for his own health and treatment – and making it possible to be a patient at home.

User Focused Innovation

Targeted development of technologies and services in cooperation between corporations, health care providers, end users and research institutions.

Innovation In The Health Sector

Improvement of the health care sector through technology supported treatment, monitoring and rehabilitation in the patient's own home – before, during and after hospitalization.

www.patientathome.dk

Patient@home is a Danish platform for research and innovation projects focusing on development of welfare and healthcare technologies for the public sector. The platform consists of more than 40 national and international partners from both the private and the public sector.

The project develops new products and services that reduce the pressure on healthcare and homecare services, and empower patients to receive integrated care in their own home.
